

OPTA – Recycle Bin

OPTA-Recycle Bin for HP NonStop Servers.

Whenever Files are deleted or purged from your system, OPTA–Recycle Bin places it in the Recycle Bin. Files in the Recycle Bin remain there until you decide to permanently delete them from your computer. The Files in a Recycle Bin take up disk space and can be undeleted or restored back to their original location. When the Recycle Bin fills up, OPTA automatically cleans out enough space in the Recycle Bin to accommodate the most recently deleted files.

OPTA-Recycle Bin allocates one Recycle Bin for each disk and you can specify a different size for each Recycle Bin. Additionally, the files in the Recycle Bin can be compressed. With OPTA-Recycle bin, no application source code changes are required and all Native and Non-Native programming languages are supported.

Other OPTA products include;

- > OPTA - Trace application System Call activity and Real-time application Debugging.
- > OPTA - LowPin Optimizer - Reduce Low Pin process Creation errors.
- > OPTA - Alert
 - >> Process Startup - Display Startup, Assign, Param and process Defines.
 - >> Process Termination - Generate EMS message and Invoke a TACL Trigger.
 - >> Process Help - Add Help, Startup / Shutdown / Recovery and versioning information.
- > OPTA2000 – Clock and Time Zone Simulator.
